

The Star Difference

Star Wireless Interface available on the TSP700

The new TSP700 Series wireless interface is now in stock and features the following advantages over its nearest competitor.

Star specified / designed wireless Interface for unique use with the Star TSP700 Thermal Printer

802.11b compliant

Compact Internal Interface

Supports WEP encryption

Printer status available via internal web server or Telnet

No extra power required

Development tools available from Star

Please note the TSP700 wireless interface will only work on models manufactured after December 2004. In order to check the status of any TSP700, please refer to the serial number placed underneath the TSP700. The 5th, 6th & 7th numbers reflect the date of production (5th character = year 6th & 7th characters = month) and as long as the three numbers state 412 or 5xx, you can be assured that the printer has the required control board to run the Star Wireless interface.
